DRAWING SHEETS

FIG. 1

**REPLACEMENT
DRAWING SHEETS**

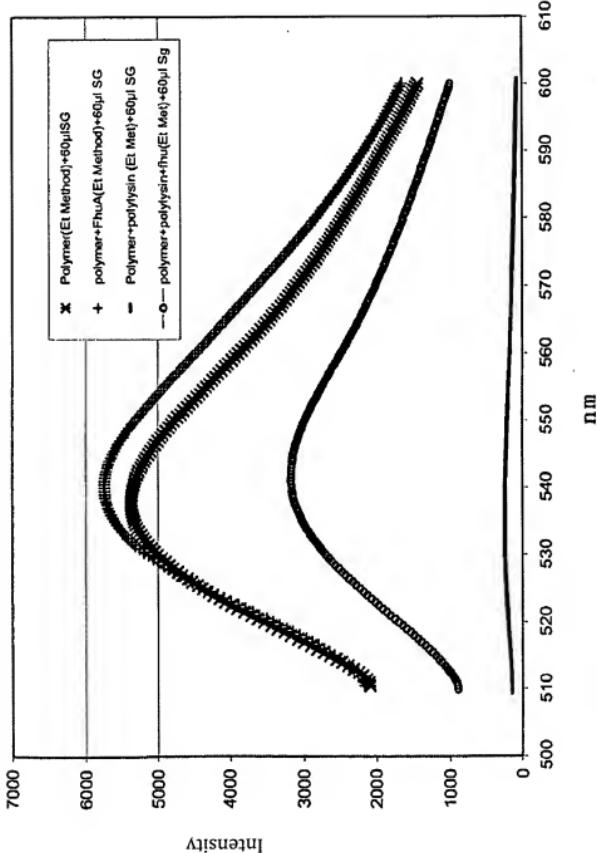

FIG. 2: Fluorescence measurement from 500nm to 610nm after addition of 60 microliters of SYBR Gold (SG) to the vesicles with and without DNA. Vesicles were prepared by the 'ethanol' method (Et Method. Et Met.). Cleaning method 1 was used for the separation.

REPLACEMENT
DRAWING SHEETS

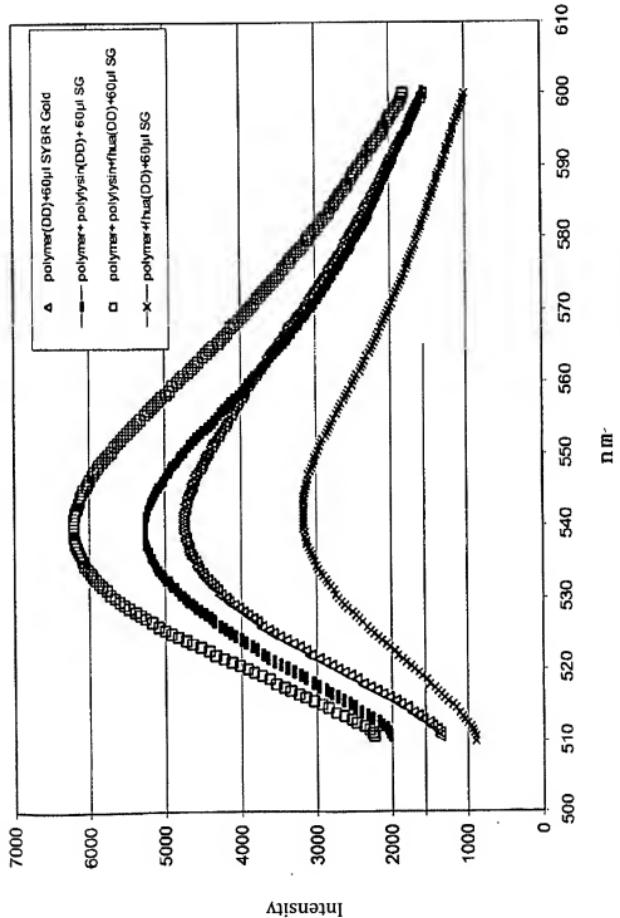

FIG. 3: Fluorescence measurement from 500nm to 610nm after addition of 60 microliters of SYBR Gold (SB) to the vesicles with and without DNA. Vesicles were prepared by the "direct dissolution" method (DD). Cleaning method 1 was used for the separation.
